The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCT-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the 180genic strain v3; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Drosophila melanogaster genome survey sequence TET3 end of BAC # B

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CNSO16LI 1101 bp DNA GSS 26-JUL-1999

Determination of this BAC-end sequence was carried out as part of collaboration with the European Drosophila Genome Project (EDGP)-http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centred Fitude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Submitted (23-JUL-1999) Genoscope - Centre National de Sequencage

Per 19 1900 and the Name of the Mail of Sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library fruitfly.org The BDGP Drosophila melanogaster BAC library days prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter da Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp. the same strain used for the BDGP's pl and how to order individual BAC clones, the entire library and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDCP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.frultfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutcoyo Osogawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BOGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's

L Submitted (02-JUN-1999) Genoscope - Centre National de Sequencage : Submitted (02-JUN-1999) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr - Web : www.genoscope.cns.fr - Gebranation of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC ilbrary was prepared by Kazutoyo Osogawa and Aaron Mammoser in Pleter de Jong's Laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's

- Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruifily.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pleter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2: on bw sp, the same strain used for the BDGP's pl and box to order individual BAC clones, the entire library and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Drosophila melanogaster genome survey sequence TET3 end of BAC: BACR32NO4 of RPCI-98 library from Drosophila melanogaster (fruit fly), genomic survey sequence.

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP)-http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre Project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Submitted (23-JUL-1999) Genoscope - Centre National de Sequencage

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Submitted (02-JUN-1999) Genoscope - Centre National de Sequencage :

Determination of this BAC-end sequence was carried out as part of collaboration with the Barkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please 'see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCT-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2, cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be

The library is named RPCI-99 and was constructed by partial scorn digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Example 2: Page 41-45: 51pp; English.

The present invention describes an apoptosis-resistant virus-sensitive cell line into which an apoptosis resistance gene has been introduced. The recombinant viruses generated are capable of expressing apoptosis-associated genes. These can then be used in a variety of diseases for which the induction of apoptosis by gene transfer, or where the inhibition of harmful apoptosis, is therapeutic. The recombinant viruses are useful as vectors for gene therapy which can be applied to cancer therapy for destroying cancer cells selectively, the treatment of autoimmune diseases and graft rejection reaction, and apoptosis induction autoimmune diseases. encountered the problem where if an adenovirus vector capable of expressing an apoptosis-associated gene is introduced into animal cell. the cells producing the virus will be destroyed because the period of time required to induce cell death by apoptosis is shorter than that required to replicate and produce the virus, resulting in failure to obtain a recombinant virus having the integrated apoptosis-associated gene. In this invention an apoptosis-resistant 293 cell line (having a problem. The present sequence represents the base sequence of the plasmid pRx-Bc1-X1-bsr, which contains the human Bc1-x1 gene, and is used in an example from the present invention.

which the induction of apoptosis by gene transfer, or where the inhibition of harmful apoptosis, is therapeutic. The recombinant viruses are useful as vectors for gene therapy which can be applied to cancer therapy for destroying cancer cells selectively, the treatment of autoimmune diseases and graft rejection reaction, and apoptosis induction therapy for inflammatory cells in inflammatory diseases. Prior arts have encountered the problem where if an adenovirus vector capable of expressing an apoptosis-associated gene is introduced into animal cells, the cells producing the virus will be destroyed because the period of time required to induce cell death by apoptosis is shorter than that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         gene. In this invention an apoptosis-resistant 293 cell line (having an apoptosis resistant gene introduced) is established and overcomes the problem. The present sequence represents the cowpox virus bsr gene which
                                                                                                                                                                                                                                                                                                                                                             The present invention describes an apoptosis-resistant virus-sensitive cell line into which an apoptosis resistance gene has been introduced. The recombinant viruses generated are capable of expressing apoptosis-associated genes. These can then be used in a variety of diseases for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              obtain a recombinant virus having the integrated apoptosis-associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     required to replicate and produce the virus, resulting in failure to

		Hamada H;
		WFI; 99-243/20/20. New apoptosis-resistant virus-sensitive cell
		3
	ខ្លួ	The present invention describes an apoptosis-resistant virus-sensitive cell line into which an apoptosis resistance qene has been introduced.
	႘	The recombinant viruses generated are capable of expressing apoptosis-
,	ဗ္ဗဗ္ဗ	딕걸
	ខ	inhibition of harmful apoptosis; is therapeutic. The recombinant viruses
	ე წ	are useful as vectors for gene therapy which can be applied to cancer therapy for destroying cancer cells selectively, the treatment of
	ខូ	autoimmune diseases and graft rejection reaction, and apoptosis induction
	ពួម	therapy for inflammatory cells in inflammatory diseases. Prior arts have
	ខ	expressing an apoptosis-associated gene is introduced into animal cells,
	ပ္ပင္ပ	the cells producing the virus will be destroyed because the period of
	88	required to replicate and produce the virus, resulting in failure to
	ပ္ပင္	obtain a recombinant virus having the integrated apoptosis-associated
	38	apoptosis resistant gene introduced) is established and overcomes the
	႘	oblem. The present sequence represents the base sequence of the
	ខ្លួ	21 2-1-nCD 25, which contains the number 2 gene, a example from the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A polypeptide comprising a plasmodium falciparum (Pf) erythrocyte membrane protein 1 (PfEMP1) or active fragments or analoques of that protein can be used in the treatment or prevention of symptoms of a malaria parasite infection. The polypeptides can inhibit, block or reverse the sequestration of erythrocytes in patients suffering from malaria. Nucleic acids derived from the PfEMP1 gene can be used as probes and primers to identify a Plasmodium falciparum parasite, the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     primers used to generate characteristic amplification patterns from different P. falciparum strains, Antibodies specifically immunoreactive with the PfEMP1 polypetide or its fragments may be used in diagnosis of malaria infection. This sequence encodes the PfEMP1 protein of the MC type of Plasmodium falciparum. An alternative, truncated version of the coding sequence (a cDNA clone) is given in T41853.

Detecting Plasmodium. Infection from hybridisation with extrachromosomal element - providing genus or species specific diagnosis with few false negatives, in humans or animals or claim 15: Page 54-59; 120pp; English.

Claim 15: Page 54-59; 120pp; English.

Claim 15: Page 54-59; 120pp; English.

This is the nucleotide sequence of one strand of the PSI-PL470 gene of the 30.7 kb extrachromosomal plastid of Plasmodium berghei.

This plastid encodes organelle-like rRNAs, tRNAs, ribosomal proteins and RNA polymerase subunits, amongst others. Plasmodium is detected in a human or animal sample by treating it, or derived nucleic acid, with a Plasmodium extrachromosomal genetic element or derived nucleic acid (A) and detecting any hybridisation. (A) can include the PSI-PL470, PLH-PPH, PRB or PWO gene, the mitochondrial coxI gene, and nucleic acids derived from them. Also new are considered probes and primers (see v33139-56). The method is polypeptides encoded by (A) are useful as targets for drug development and for development of anti-malaria vaccines. The high development and for development of anti-malaria vaccines. The high development of genus- or species-specific assays that result in fewer false negatives than known methods (typically 1% against 3%). Sequence 5849 BP; 2296 A; 673 C; 2323 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          154 ttttcatacatttgattttgataataaatatatttttttaattcttaaaaaatgttgc 213

DBL gene family; SABP; sialic acid binding protein; vaccine; therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The inventors claim a novel DNA molecule which comprises a nucleotide sequence corresp. to all or a portion of the base sequence coding RESA (N60472) or FIRA (N60473). RESA and FIRA have antigenicity suitable for providing protective immunity against Plasmodium falciparum malarial infections. Sequence 4590 BP: 1933 A; 437 C; 673 G; 1547 T;
Sequence encoding the ring-infected Erythrocyte Surface Antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DNA coding for Plasmodium falciparum antigens - expressing poly:peptide(s) having antigenicity of RESA or FIRA antigens falciparum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match 4.3%; Score 56; DB 1; Length 4590; Best Local Similarity 52.1%; Pred.                                                                                                                                                                                                                         claim 4; Page 56-61; 96pp; English.

This sequence represents the var-7 gene of Plasmodium. Var-7 belongs to the Duffy binding like (DBL) family of genes which have homology to the Duffy antigen binding protein (DABP) and sialic acid binding protein (DABP) and sialic acid binding protein (SABP) conserved regions (see 772889 and 772888 respectively). The var family of genes modulate cytoadherence and antigenic variation of Plasmodium infected erythrocytes. SABP and the Duffy antigen binding protein (DABP) are soluble proteins that appear in the culture superantant after infected erythrocytes release merosofies. DABP and SABP mediate the binding of merosofies and schizonts to the erythrocyte surface. These proteins are necessary for erythrocyte invasion by the parasite. This sequence can be used in the compositions of the invention. The compositions are necessary for erythrocyte invasion by the parasite and colectide sequence or encoded polypeptide of the var-1, var-2, var-3 or var-7 genes of the DBL gene family, a family of genes having homology with conserved regions of DABP and SABP. The compositions are used for the treatment and prevention of malaria. They are also used in the preparation of vaccines for inducing a protective lammal to plasmodium merozoites (especially Plasmodium and Plasmodium merozoites (especially Plasmodium and Plasmodium merozoites (especially Sequence 19124 BP; 7824 A; 2190 C; 2790 G; 6320 T;

Claim 17; Page 30; 41pp; English.

This is a partial nucleotide sequence of the mitochondrial DNA from a pythium oligandrum isolate 23-5. Nucleotide sequences which are inverted repeats, flanked by Peti restriction sites from mitochondrial DNA from various P. oligandrum isolates are shown in V19576 to V19583. These Pythium isolates are non-pathogenic and can be used in a method for controlling phytopathogenic organisms where the organisms are contacted with such a Pythium isolate. The Pythium isolates are used to contacted with such a Pythium isolate. The Pythium isolates are used to contact ingi. Specifically pathogenic Pythium solates are used to other soil borne pathogens), particularly for protecting plants (seedlings, transplants or vegetable crops such as tomato) against isolate sequences are useful as sources of probes for identification of particular isolates. The isolates are widely distributed in nature, with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     a similar ecology to pathogenic species. They produce large quantities of cospore inoculum on liquid or solid substrates and are tolerant of several commonly used fungicides. A single application at the greenhouse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               plasmodium var-7 gene.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  à
                                                                                                                                                                                                                                                                                                                                                                       Claim 4; Page 56-61; 96pp; English.

Claim 4; Page 56-61; 96pp; English.

This sequence represents the var-7 gene of Plasmodium. Var-7 belongs to the Duffy anning protein (Dame) of genes which have homology to the Duffy anningen binding protein (Dame) as a fact of binding protein (Dame) and T7288 respectively). The var family of genes modulate cytoadherence and antigenic variation of Family of genes modulate cytoadherence and antigenic variation of protein (DABP) are soluble proteins that appear in the culture cyportein (DABP) are soluble proteins that appear in the culture supernatant after infected erythrocytes release merozoites. DABP and SABP comediate the binding of merozoites and schizonts to the erythrocyte surface. These proteins are necessary for erythrocyte invasion by the parasite. This sequence can be used in the compositions of the invention. The compositions are for the treatment and prevention of malaria, and comprise either a nucleotide sequence or encoded polypeptide of the var-1, var-2, var-3 or var-7 genes of the DBL gene family of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             genes having homology with conserved regions of DABP and SABP. The compositions are used for the treatment and prevention of malaria. They are also used in the preparation of vaccines for inducing a protective immune response in a mammal to Plasmodium merozoites (especially Plasmodium falciparum or Plasmodium vivax).

Supersont polynucleotide sequences isolated from Borrella burgdorferi (Bb). Products derived from Bb can be used for the detection, diagnosis, characterisation, prevention and therapy of Bb infections, e.g. Lyme disease. They can also be used for the production of blosynthetic products, e.g. enzymes. Borrella belongs to a family of motile, spiral-shaped bacteria called Spirochetss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        in humans and Borrelia causes epidemic and

epidemic relapsing fever; endemic relapsing fever; Lyme borreliosis;
infection; diagnosis; characterisation; detection; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   claim 7; Rage 59-60; 84pp; English.

Human apoliopprotein B (apoB) scaffold attachment region (SAR)
element clones Rh32 (731530) and Rh10 (731531) respectively carry
the 3' human apoB SAR element and the distal 1212 bp 5' human apoB
SAR element and 1317 bp proximal sequence. These SAR elements
co-map with the boundaries of the human apoB gene chromatin
domain. A novel recombinant DNA molecule adapted for transfection
of a host cell comprises an erythropoietin (EPO) cDNA (731529) or
genomic clone (731532) operably linked to an expression control
increase expression of the recombinant EPO in stable, long-term
                                                                                                                                                                                                                                    Recombinant DNA molecule expressing mammalian erythropotetin useful to transform cell lines, and for gene therapy, e.g. of anaemia and other red blood cell disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 4.0%; Score 52.6; DB 1; Length 605; 55.1%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Tor, e.g. producing recombinant Orphingres cellulase process of the form of the form of the following recombinant Orphingres cellulase in host cellulations of the following recombinant Orphingres cellulase in host cellulations of the anacrobic bovine rumen fungus Orphingres sp. pc-2. It was obtained by screening a pc-2 cDNA library for clones active on remazol brilliant blue-cerboxymethylcellulase. The encoded cellulase has endoglucanase, but not celloblohydrolase, activity. CelA and celC genes (see V29472-73), also obtained from Orphingres sp. pc-2, encode cellulases having both activities (see W56738-39). Recombinant DNA molecules encoding Orphingres cellulase proteins are claimed, as well as recombinant cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New recombinant DNA encoding Orpinomyces cellulase protein - useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         199 cttaaaaaatgttgcaagacacttattagacatagtcttgttctgtttacaaaagcattc

New recombinant DNA encoding Orpinomyces cellulase protein useful for, e.g. producing recombinant Orpinomyces cellulase in host cell for, e.g. producing recombinant Orpinomyces cellulase in host cell This cDNA clone includes a claimed coding region for cellulase celB (see w56742) of the anaerobic bovine rumen fungus Orpinomyces sp. 67-2. It was obtained by screening a PC-2 cDNA library for clones active on remazol brilliant blue-carboxymethylcellulose. The encoded cellulase, has endoglucanase, but not cellobiohydrolase, orthing and celC genes (see V29472-73), also obtained from Orpinomyces sp. PC-2, encode cellulases having both activities
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (see W56738-39). Recombinant DNA molecules encoding Orpinomyces cellulase proteins are claimed, as well as recombinant cells selected from Saccharomyces cerevisiae, Escherichia coli,

Description

Z to Z	JOURNAL SUBMILTED (10'MAY-1998) sanger ac. uk/HGP/Chrb/) Sanger Centre, Hinxton, Cambridgeshire, CB10 15A, UK. E-mail enquires: hunquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk COMMENT On May 18, 1998 this sequence version replaced g1:2009620. IMPORTANT: This sequence is the entire insert of clone 352A20. During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variations annotated may not be found in the sequence submission corresponding to the overlapping clone as we submit sequences with only a small overlap as described above. This sequence was generated from part of bacterial clone contigs of hunan chromosome 6, constructed by the Sanger Centre chromosome 6 hunan chromosome 6, constructed by the Sanger centre chromosome 6 hute; //www.sanger.ac.uk/HGP/Chr6/ This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated hunan repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure' feature key. The true left end of clone 352A20 is at 1 in this sequence. The true right end of clone 352A20 is at 1 in this Saguence. The true left end of clone 352A20 is at 144759. 352A20 is from the library RPCI3 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong.                                                            Submitted (03-AUG-1999) Production Sequencing Facility, DO Genome Institute, 2800 Mitchell Drive, Walnut Creek, CA 94 On Feb 18, 2000 this sequence version replaced 91:6601030.
                                                                                                                                                                                                                                                                                                                                                                                         NOTE: This is a 'working draft' sequence. It currently consists of 56 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               length
